Footer

Wiremap

Wiremap was designed with different coloured sections so it's easy to see different sections when designing
Actual website colour is one solid background colour for cleaner/simple visual

Components

A Website Portfolio

Portfolio website built in HTML, CSS and SCSS

Technologies Used

- - Html5
- - CSS
- - SCSS
- - Github
- - Netlify to deploy
- - Sass (live compile)

- Description:
- this was built to show the technical skills, and responsive web design skills as part of the portfolio assignment T1A2
- a simple website design with plain background colour and white and black text
- navigation bar to go to each part of the website as the header
- dropdown menu when you hover the menu/blog. intended for easy viewing for mobile site view and also for general accessibility go to each blog post and page
- Target audience is for other aspiring web developers and students
- Footer includes link to github and other dummy webpages

External used :

footer logos:

Screenshots Desktop

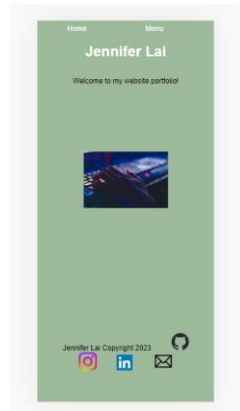

Dropdown menu when you hover the 'Menu' on the navigation bar
background-color: #9dba9a; and black and white text

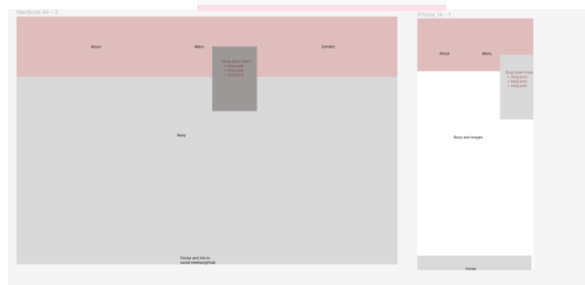

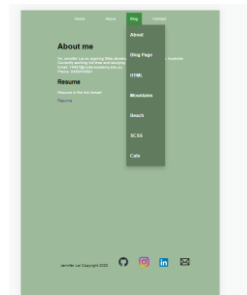

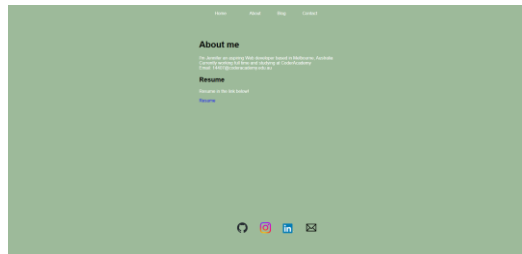

Used CSS to create dropdown and hover for the dropdown menu
Used list for the dropdown content

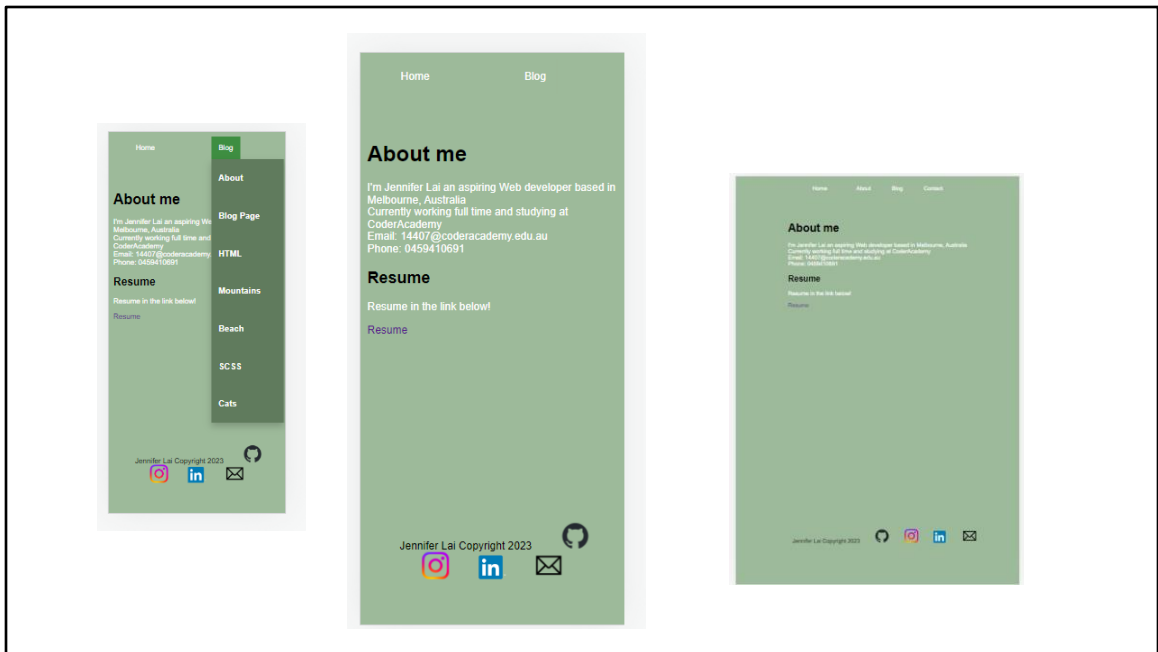

Screenshots Mobile/Tablet

Dropdown menu when you hover the 'Menu' on the navigation bar
About and contacts are hidden from nav bar on mobile view due to space

Screenshots Desktop

Designing the hover menu was most challenging as I initially wanted a submenu but decided it will be too complicated for mobile users

Desktop view contacts

Footer is inside the contacts form so audience can easily see and click

I used CSS to center the website as I feel a more center page will be able to engage the audience better.

Social media links inside the form as well to have the centralised view as mentioned before

- Contact page menu doesn't have the contact for simple design

Screenshots blog desktop

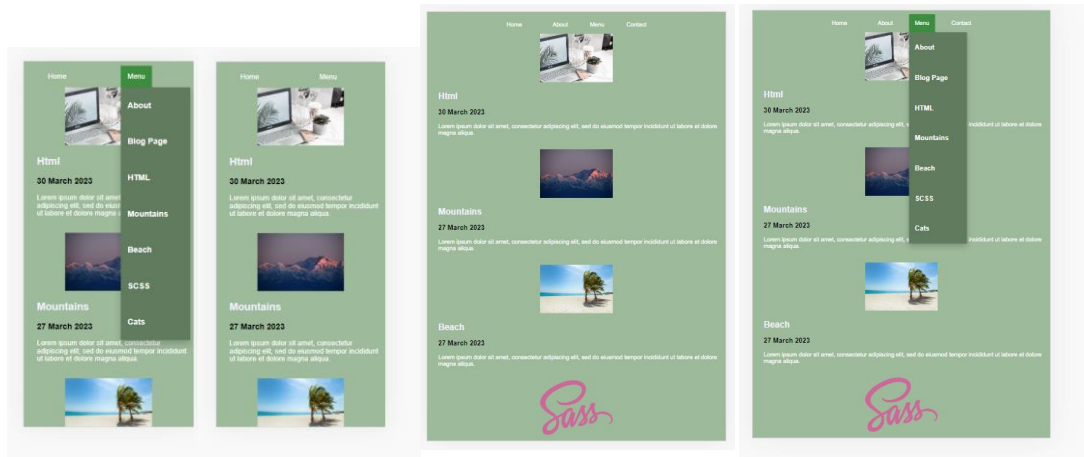

Content is centered for the blog page for easy viewing
Alternating text colours

This was my favourite part but also difficult as I was struggling with which design was best

Justified content to center and column display using css

Blog page and navigation

No borders for these posts as I wanted to make them easy to scroll

Phone/tablet blog page
